OFFICIAL DATA THROUGH 12/31/2025, UPDATED 4/20/2026 (See "DATA SOURCE" Number 1, below)

DATA SOURCE: 1) NOAA, National Centers for Environmental Information (NCEI), Storm Events database:

<https://www.ncei.noaa.gov/stormevents/>

2) NOAA, National Weather Service - Baltimore/Washington, Sterling, Virginia:

<https://www.weather.gov/lwx/>

3) NOAA, National Weather Service - Wakefield, Virginia:

<https://www.weather.gov/akq/>

4) To keep this archive as updated as possible, newer reported Waterspouts might be from sources other than those listed above until official data is released in the NCEI "Storm Events" database.

- NOTES:** 1) The Storm Events Waterspout database begins on 1/1/1996. For the Storm Events data searches prior to 2002, the State of "Maryland" was the searchable term, which then listed each by County. From 2002 to the present, the "Atlantic North" Marine Zone is the searchable term and each is listed by those zones. The Storm Events database updates are usually about 4 months behind the current date.
- 2) The entire Storm Events database was researched for all Waterspouts that have been reported on Maryland waters and are listed in the table, above. Additionally, the National Weather Service's Storm Surveys have all been researched in determining which of these Waterspouts were also Tornadoes, either prior to or following landfall. In one case, it was discovered that a listed Waterspout/Tornado on 7/1/2021 only occurred within the boundaries of Washington, DC so is not listed in this Maryland Waterspout Archive.
- 3) Property Damage includes all monetary values from the entire Waterspout/Tornado path that occurred. Most values will be from the tornado portions.
- 4) The Time Zone for this Maryland Waterspout Archive is currently Eastern Standard Time (EST - minus 5 hours from Greenwich Mean Time). The Maryland Tornado Archive on this website is the Local Time (Eastern Standard Time and Eastern Daylight Time, depending on occurrence) so currently might disagree with this archive. Changing this Waterspout archive to Local Time is being considered.
- 5) From 8/25/1999, the "Storm Events" database under category "Waterspout" shows the location is in Hoopersville but is not listed under a "Tornado" search. Also, it's not in the Storm Prediction Center's database as a tornado. From NWS-Wakefield Storm Survey: "Waterspout from the Chesapeake Bay moved onshore and caused roof and siding damage to houses. Also, a wooden chair was carried about one-half mile and a gazebo was picked up." The location is listed only as "Hoopersville" with no coordinates provided. Due to the land property damage and dollar amount, it is included in this archive as "Waterspout/Tornado."
- 6) For Waterspouts reported on 5/7/2003 at 19:30 at "Drum Point" and "Solomons Island," it was discovered that there are two Marine Zone listings for the same Waterspout, "CHESAPEAKE BAY N BEACH TO DRUM PT MD" and "CHESAPEAKE BAY DRUM PT TO SMITH PT VA." The duplication was likely because the single Waterspout crossed through these two Marine Zones. In order to avoid duplication in this Waterspout Archive, the single ""CHESAPEAKE BAY N BEACH TO DRUM PT MD" is the only Marine Zone retained.
- 7) For the Waterspout reported on 8/8/2005 at "Tilghman Island," the Storm Events Database shows "Tilghman Island" and the beginning and ending coordinates are at Tilghman Island but the narrative shows, "The Coast Guard reported a waterspout near Bloody Point. The waterspout lasted for about eight minutes." Bloody Point is at the southern tip of Kent Island, approximately 8.6 miles to the NNW of Tilghman Island's northern point. It's currently unknown if the reported Bloody Point Waterspout was a second one in addition to the Tilghman Island Waterspout or is just a mislabeled location.
- 8) The EF-2 tornado/waterspout that struck the Annapolis area on 9/1/2021 caused damage along its 11.43 mile path, with touchdown in Owensville, 3 miles west of Galesville in southern Anne Arundel County, then moving northward through the western side of Annapolis. Most of the significant damage occurred in the Edgewater-to-Annapolis portion. As of 12/23/2025, property damage value has yet to be provided as both the Storm Report and Storm Prediction Center databases continue to show \$0.00 losses. If this event's damage estimate is eventually provided, it will be added to this table. This waterspout is not in the official National Centers for Environmental Information's Storm Events database (it is as a tornado) but is added to this archive since the tornado did cross the South River.
- 9) For the Waterspout off of Ocean City on 8/28/2025, there is no official data in the National Centers for Environmental Information (NCEI) Storm Events database. The information provided is from meteorologist Justin Berk's Facebook page containing several videos taken from the beach with the date of 8/28/2025.
- 10) For the Waterspout off of Ocean City Inlet and Assateague Island on 4/20/2026, there is no official data in the National Centers for Environmental Information (NCEI) Storm Events database. The information provided is from the "Southern Maryland Weather Center" Facebook page containing several photos and videos taken from the beach, including the Assateague Island gift shop. Time was confirmed by that Facebook page owner's response to a request.
