- NOTES:** 1) A Trace amount of snowfall or sleet is a measurement which is <0.1" and includes flurries or snow that melts upon impact.
- 2) This data does not include hail.
- 3) The "Days Between Occurrences" include those dates that fall one day after the first date then up to an including the last date of snowfall. When the first and last occurrences are on the same date, "0" is shown.
- 4) The dates for Trace amounts are available back to 1/1871. The 0.1" and 1.0" categories are currently found back to 7/1883; some of the older data, which has recently been revised in the NWS's NOW data and the ACIS database, was updated in these data tables, most recently on 1/28/2023.
- 5) Cells with this gray background indicate unavailable past data or future data.
- 6) Months with this blue background are those that had the first occurrence into the second year of that season or the last occurrence in the first year.
- 7) **Dates** with this dark pink background and **bold text** are the extreme earliest and latest dates for that category. For the years with no occurrence for a category, "**None**" is shown in place of the latest first occurrence and earliest last occurrence. **Values** with this dark pink background and **bold text** are the greatest and least in the archive.
- 8) Dates with this yellow background indicate when an exact date cannot be determined but a month can be for the associated amount; the month is portrayed followed by "?????" along with that month's total snowfall.
- 9) *Date with this blue background color is the current latest snowfall and Average Last Occurrence. If a later snowfall occurs, this info. will be updated.*
